Climate Action plus Local Engagement

Supporting international climate projects offers companies an established and effective instrument for actively promoting climate action. Projects eligible for this are primarily located in emerging and developing countries, where a much larger impact on the climate can be achieved per euro of investment compared to here.

More and more companies, however, would like to go a step further by taking action within their

own region. Climate protection at work -- and directly in your community!

With our KlimaKombi+ offer, we can help you make a difference right here in Germany. KlimaKombi+ combines global climate action with regional environmental projects.

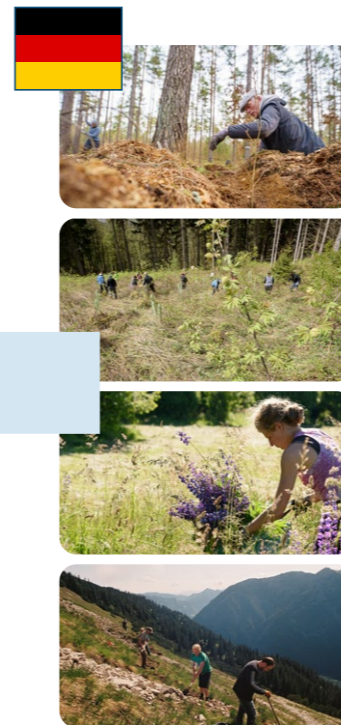

International Climate Action

With KlimaKombi+, you support the forest protection project, Rimba Raya Biodiversity Reserve REDD+ in Indonesia.

For each purchased emission reduction certificate, an additional fixed donation is made to one of four nature conservation projects in Germany. You can choose which project you wish to support.

Regional Commitment

Adamswalde

Forest and peatland restoration

Sauerland

Reforestation

Biosphere Reserve Rhön

Moor rewetting

Oberammergau

Biotope maintenance and afforestation

Forest Conservation and Avoided Deforestation: The Rimba Raya Reserve-Project in Indonesia

The forest conservation project Rimba Raya Biodiversity Reserve REDD+ is located in Borneo's southeast stretching almost 100 km² from North to South along the borders of Tanjung Puting National Park. The project protects 64,000 hectares of natural rainforest from deforestation and contributes to the upkeep of the forest as an important carbon sink.

Moreover, the area is home to hundreds of species threatened by forest exploitation. The project is dedicated to the protection and preservation of many endangered species, most notably, the endangered Bornean orangutan whose population has declined over 95% in the last century. Rimba Raya was the first REDD project to earn Triple Gold Validation under the CCB Standard.

Sustainable Development

By supporting this project, you'll contribute to the following Sustainable Development Goals:

Key Facts

Location: Borneo, Indonesia

Project Type: REDD+

Project Standard:

Verified Carbon Standard (VCS)
Climate, Community and Biodiversity Standard (CCB)

Emission Reductions:

3.5 M t CO₂ e p.a.

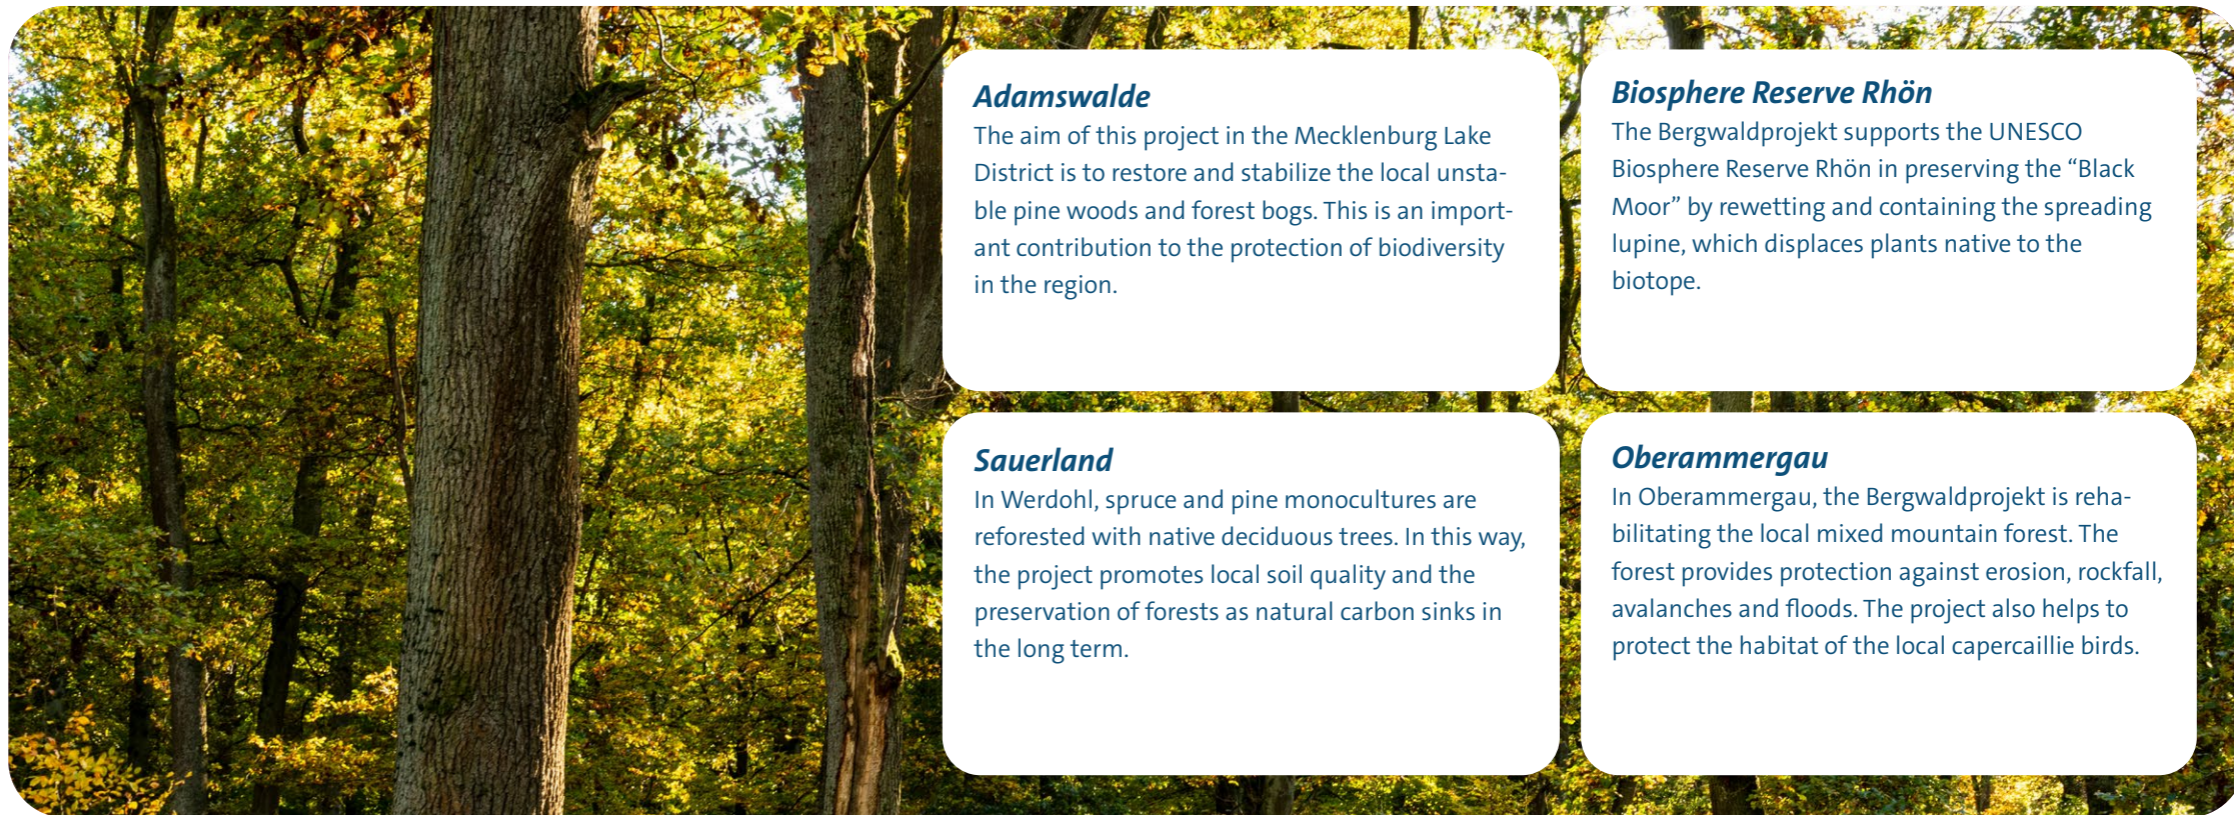

Local Climate Projects

First Climate's long-standing and close partner for conservation measures in Germany is Bergwaldprojekt e.V., a non-profit organization. This organization carries out forest and nature conservation activities in Germany.

Bergwaldprojekt e.V. makes an important contribution towards protecting our local forests, which are increasingly being threatened by climate change.

There are four local projects that can be combined with supporting the climate project in Indonesia:

Adamswalde

The aim of this project in the Mecklenburg Lake District is to restore and stabilize the local unstable pine woods and forest bogs. This is an important contribution to the protection of biodiversity in the region.

Biosphere Reserve Rhön

The Bergwaldprojekt supports the UNESCO Biosphere Reserve Rhön in preserving the "Black Moor" by rewetting and containing the spreading lupine, which displaces plants native to the biotope.

Sauerland

In Werdohl, spruce and pine monocultures are reforested with native deciduous trees. In this way, the project promotes local soil quality and the preservation of forests as natural carbon sinks in the long term.

Oberammergau

In Oberammergau, the Bergwaldprojekt is rehabilitating the local mixed mountain forest. The forest provides protection against erosion, rockfall, avalanches and floods. The project also helps to protect the habitat of the local capercaillie birds.

About First Climate

With 25 years of experience and hundreds of diverse clients, First Climate is a leading service provider of climate protection solutions and renewable energy. We support private and public sector organizations in achieving their climate and sustainability objectives.

Our core competencies cover products and services relating to carbon neutrality, green energy, green investments, and project development. For public sector clients, we provide consulting for industry best-practice as well as emissions trading services.
